The Neuro-ophthalmology Survival Guide, 1e

Synopsis

A practical, symptom-orientated handbook of neuro-ophthalmology for all trainee and practising ophthalmologists. Practical and accessible handbook for the ophthalmologist without a specialist interest in neuro-ophthalmology and acquired strabismus. Simplifies a subject which is often a cause of litigation against practising ophthalmologists and exam failure for trainees and residents. Aids diagnosis in a field in which mistakes may lead to medico-legal problems, eg brain tumours presenting with blurred or double vision. Symptom-orientated - guides the reader from the presenting symptom to diagnosis and treatment or referral, through a series of easy to follow flowcharts. Chapter One presents 20 "golden rules" to keep you and your patients out of trouble

Book Information

Paperback: 424 pages

Publisher: Mosby; 1 edition (March 27, 2007)

Language: English

ISBN-10: 0723434050

Customer Reviews

This is one of my most favorite books in the field of neuro-Ophthalmolgy. It is filled with very helpful information and beautiful pictures. When i recommend a book in the field of neuro-Ophthalmolgy, I most often recommend this book to my colleagues who want to get a real neuroophthalmology practice help.

very hands on, clinically relevant guide which should help both with exam prep and day to day practice in the acute eye setting

easy to use great help in everyday practice

for those colleagues battling in the first line of health care in optometry a real survival guide: a great help in determining the value of many subjective findings in relation with the observations and (as so many times is the case) the near absolute void in objective findings when inspecting the person, the eyes with MIO BIO and BIOMicroscopy. should be in every study on the desk, when the optometrist is keen on keeping the mazes of the net as small as is humanly possible.
